Effects
Heavy metals in soil and water
Heavy metals in animals and plants
Heavy metals in humans
Forensic sciences

ORGANIZING COMMITTEE

M. Luisa Carvalho (Chair)
Joaquim dos Santos (Co-chair)

René Van Grieken
Ignasi Queralt
J. P. Marques
Pedro Amorim
Cristina Monteiro
Marta Manso
Sofia Pessanha

The workshop is being organized for the first time as a national symposium on application and detection of heavy metals: in the industry, medicine, agriculture, and environment.

The main goal of the Workshop is to bring together scientists working on trace elements and heavy metals to discuss recent developments on their detection and roles on their effects.

An important goal of the symposium is to confront the opinions of scientists and academics with the key representatives of national regulatory bodies dealing with environmental protection to plan further research fulfilling the needs of our modern society.
